

Meeting 013: 22-Dec-2021

— Page 121 to Page 133 —

UK session

Attendees: LE, RD, MF, AS, GM, JL, JS, PS, RB, BD, XJ

LE: Found myself getting emotional reading it. Reveals more each time and hit me quite forcibly. I had for some time thought about this book Am I going to understand it? Forcing me to look at myself. Confirms what Krishnamurthy and Bohm and Rodney Collin wrote about – no time exists other than what is in the chapter. Opens up the possibility of stepping out of time. Recommend on YouTube.

RB: Important to understand some of the words.

LE: Have a list of some of them and don't understand some of them. You know when you know something but don't know how you know it ... listening to Krishnamurthy and Bohm – no such thing as time – proved and proved in this chapter. Ramification is huge. Why we are aging so quickly. In life is real – can change the tension of the clock – clearly states and think that is what he is saying in this chapter. Why we aren't living to the age of wisdom – at 40 or 50 running out of time.

RB: G said to somebody that he met someone who was 300 years old and said the body will do 500 years. Primary issue occurs after age of 21. Prior to that resilient then goes into decline. Governor on spring that allows it to unwind more slowly. Destroyed by emotions. Law of three – need to be scientific – H24 emotions and H96 upkeep of the body. H24 will consume H96 if you allow it and it does. Mostly can recognise their favourite negative emotion – lines on their face.

RB: Krentonalnian? Russian word, talking about listing – motion going on between pull on one hand law of falling and on the other law of catching up. Not about planets, about us. 389 – ratio of distance between Earth to Moon and Earth to Sun. Prime number. Something contextual about man and our distance from the Moon and Sun.

Samos and Selos. Samos is 'T' in Russian.

LE: I and It?

PS: Two suns?

RB: In me ... Head and Heart/Solar Plexus. Think that is involved.

RB: Krentonalnian – lurching – what we do.

RB: Cosmic units – not a term we are used to. Can swap living thing for cosmic unit.

RB: Laws of World Creation and World Maintenance. To perfect your kerdjan body – would be world creation – a new world that wasn't properly formed, you would have created. If you took a partly formed soul and perfected, would also be world creation. What we do every day with our body is world maintenance. Algamatant, Looisos, Sakaki – that is what they do. If you didn't understand that the most significant thing your body does is digestion...

RB: Putting all notes/contributions into the web site in time. There will also be a forum – can put other comments in there if not thought to be worthy of the notes. Will create a resource that came from over 30 people. Will take a while. Lots of material and takes a lot of time. Put up the first book in text, broken into pages that almost correspond with the book. Set of audio

of neologisms to add, so can get an idea of how each word is pronounced. Also Paula's reading will be there if you want to listen to it read. Form for contributions also. Will demo next meeting or one after.

Hypochondriac?

https://www.etymonline.com/word/hypochondria?ref=etymonline_crossreference

RB: Melancholia – related to the liver.

GM: Lack of regular functioning causes the tension. They are very heavy.

GM: Objective Science – capitalization. Could we go through the book and look at that?

RB: Objective Science seminars – ISOM and from The Tales. Differences. What he told his Moscow groups what they need to know. In this book, explaining how the world works. Doesn't talk about Time in ISOM and does here.

Time in itself does not exist ...

RB: Human conception of time as an ordering of events, exists as a set of totality of results ... know this from physics – if you have a set of events occurring on Earth and same events in the orbit of planet Earth, will happen in different time. Thought to be gravitational, but G says not. Our memory orders events – he is saying Time isn't that.

GM: Sitting – splitting my attention – time relative externally, but not in the inner level, so don't have a sense of time in inner world. Relational to external. Time to me is very non-existent ...

RB: We are forced to compromise ... will agree that something took a certain amount of time if we were both there and know the start and end time. Reality may have been that you were in a relatively higher state during that time, so your inner perception might be that it lasted 8 days and it may have been only 8 mins to me. All of us have experience higher states and know that everything is going incredibly slowly. Seems like you were cheated, but didn't do anything other than experience it. This chapter fits into a slot that isn't completed until you read Purgatory. The issue the Absolute had that led to the creation of the Universe was the Heropass – what we would think of as time – not the ordering of events, the time that is imposed on us – may be that one of us lives to 90 and the other 75, reality is that as human beings if we managed ourselves well, condemned to a lifetime that is limited.

GM: How does his accident come into this?

RB: Let's not complicate this - later. There is a limit that is measured in breath and is determined by things coming from outside : food, breath, impressions. May be able to do things in order to make elapsed time in terms of planets longer and can also mess with it so it is longer, but only mechanical. We cannot avoid that we will die. That is the battle that the Absolute was having with the Heropass. In order to create a Universe to stop the Heropass ... ejected and everything outside was subject to the Heropass. All have a lifetime and the Heropass is what creates a lifetime. The Absolute doesn't have a lifetime. That becomes clear after Purgatory, but need to know that now. Trogoautoegocrat needs to have things presented for feeding ... Fulanitamnian principle – would normally have perfected kesdjan body ... reaching completion.

GM: P124 ... like Divine-Live ... trying to put together

RB: Heropass is in us. Flowed into us at our creation and will flow out at our destruction and determines our life. Not part of any fractioning. Will get to discuss Okidanokh (maker of awareness). Universe is created according to scheme whereby awareness of the Absolute is fragmented – breaths it into the Universe “Theomertmalogos” – enters into it, in a bacteria, virus.

Fractioning of the Absolute and the case for awareness of everything alive.

GM: How connected to Egokoolnatsnarnian-sensation?

RB: In direct contact with The Absolute creates a certain sensation of time and taken as the basis of elapsed time. Subjective – ego. If I'm a galaxy and perceive the Absolute, will be a unit of time for galaxy – ego = subjective.

RB: We are the creation of the Heropass as well as of the Absolute. Very close to Zoroastrianism. Regarded the Universe as a struggle between 2 forces: Mazda and Ahriman?

Do beings in the water have same evolutionary possibility?

RB: In some parts of the Tales G declares there are Polormedktian beings – have the full enneagram – have 3 brains at their level. Beings at various levels have possibility of evolution. Question of being eaten – possibility of being eaten by Archangels. Goal and in order to do that have to develop a soul. Aren't going to turn up on Sun Absolute and shake hands with God, but might be a particle of something that can do that.

MF: Aboriginals don't have this system of Time counting – Moon and Sun. Do counting by other astronomical events. Mutant Message Downunder. Celebrate when people reach a step to wisdom, but not birthdays. More independent from Heropass?

RB: Different model and difficult to put in their position. Possible that they have a freedom we don't have. Told there are tribes in N Africa that doesn't have numbers greater than 9. Couldn't look at 12 of anything – just a lot. Indication of an issue that arises due to language and can have a different perception of time.

RD: 3D Time and omnipresent? As described by Rodney Collin.

RB: What do you mean 3D time? Repetition and recurrence? We are in 3D time. The problem of conception of 3D time is that it is nested. You have cells in your body – in 8 months all of them have changed and you will still look like the same person. They have gone through recurrences. Red blood cell – don't think it lasts beyond a day. From when blood first flowed in you until your death. They are going through all 3 dimensions while you are going through one dimension, because of the nature of scale. Makes it difficult to envisage – talking about eternity, but it never got any bigger than your body. Eternity at that scale is a human lifetime of 80 years – at that scale is eternity. Same at the level of the planets. Our 3D time is a fractioning of the life of the planet.

LE: 4668 years?

RB: 12 times 389 – Hasein's life.

RB: Objective Science: truth laid down by a mind much higher than ours and G relaying and our job is to understand and verify our understanding. Not a question of right or wrong – just take as read and try to articulate and prove whether it is true or false. An act of faith.

J: p123 – taking Ouspenskian reading of fraction – distance between deflections. P124 – Divine-Live – what is involved in the Autoegocrat. Envisioned a tetrad at the top – H1 and below that before emanation of Theomertmalogos – law of 3, came from Endlessness: Heropass, Etherokrilno, Divine-Love (reconciling) – get blended into fractioning of cosmos.

RB: Good to try to get a grip on that area. My efforts have served me well. Question that arises is what exactly is The Absolute? You have articulated as H1. Does the Absolute define everything, or anything it is external to. To complicate the issue, does number precede the Absolute, or come after? Good to ask similar questions – optimistic to expect to get answers.

Universe created on what substrate? What exists before the act of creation? If a Universe existed before the act of creation, did that have a substrate and what was its number system? Absolute has awareness. Is there anything that doesn't have an awareness?

J: Hoping (this group) to flesh out what G is telling us. Seems that whatever needed to happen was a one-time shot. Not a multi-verse vision. One-time effort and eternal – will continue until Endlessness decides to stop.

RB: Idea of holding the dove. Hold it too tight will kill it, too loose will fly away. Any assertion that any particular theory is absolutely true will kill the dove. Not within our ability to know the Truth Absolute. If we hold it too loosely and start associating with a theory that doesn't belong – opening hands and letting dove fly away. Attempting to get close to the resonant frequency of the truth and if we get close the truth will come down and speak to us. Not going to get there by assertions and logic. Will get there by being. Engaging with those concepts is valuable, as long as you don't kill the dove.

US Session

Attendees: SW, ATe, BP, ATa, JOD, RJ, SF, JK, AL, JT, FB, DJ, MP, JA, Linda

SF: Time has always been a difficult thing for me to understand – Einstein's relativity – never understood it. This text is about inner work. My concept of time or what I even think it is – importance I accorded it – as topsy-turvy as anything else in my perception. Relative durations depending on where you sit in the cosmic octave. Subjective trick that makes us all experience differently ... Seems to be saying that if I had a kesdjan body my notion of time would be entirely different and would have reference to my place in the cosmos. No idea what to do with Egokoolnatsnarnian.

RB: No need to try to understand Einstein – wrong – deflected the whole of physics for about 100 years. Irrespective of relativity garbage, wouldn't align with the view that the Work has of time. Various discussions with Ouspensky – viewing as a 3D phenomenon.

AT: My understanding of Time. Example – personal experience. On a boat, looking out at the horizon and moving at 10mph and can see the water passing as I go. If I start to move my head closer to the water, appears to be moving faster and if it is within a millimetre, will appear to be at speed of light. So closer I am seems to take less time to get from point A to point B. Rip Van Winkle – fell asleep and woke 30 years later ... didn't take in any impressions. Time subjective – perception.

SJ: Eludes me – as soon as I think I have one section straight, another not ... p124: "Time alone, or, as it is sometimes called, the 'Heropass,' has no source from which its arising should depend, but like 'Divine-Love' flows always, as I have already told you, independently by itself, and blends proportionately with all the phenomena present in the given place and in the given arisings of our Great Universe."

How to turn into an allegory?

RB: This is the Objective Science thread. Not mentioned prior to this chapter – this is the beginning of it. Can't really understand until you have also been through Purgatory. Separating the word "time" from the ordering of events. There is an ordering of events in the life of any being – that is not what Time is – it is the Heropass. The Heropass blends with the life of individuals. Sophisticated idea and will possibly take more than this meeting ... Introduce now that the creation of the Universe according to G took place in order to expel time from the Sun Absolute. Assuming that occurred and the effort was successful, there is no Time on Sun Absolute – events, no Time. Also says Heropass was ejected from Sun Absolute, but pervades the rest of the Universe and participates in the rest of all cosmic units. Heropass enters in at the

creation of a cosmic unit. Difference is that everything outside of Sun Absolute has a lifetime. All lifetimes are the same – experience of time the same – series of events that occur and Heropass that confers that. Not certain what the Egokoolnatsnarnian sensation is. Has the word ego in it – implies subjectivity – don't know what to do with that.

Everything except for the Heropass is a fractioning of the Absolute. Take a life form – has an element of the Absolute in it which has to do with awareness. Not explained until next couple of chapters. Do of the Ray of Creation creating a fragmentation and it is projected into the Universe from the Sun Absolute. To make it even more complicated and difficult to understand, as far as we are aware, there isn't anything outside the Sun Absolute!

AT: Looking forward to Purgatory and other chapters. Merciless Heropass and is the unique subjective. Zoroastrianism has equivalent of Heropass. Duration of man's life have pondered Fulasnitamnian principle and the need to adjust.

RB: If anyone wanted to compare with another area – would be Zoroastrianism. Relationship between Mazda and Ahriman seems similar. No other tradition that has relationship between two things that are at odds and struggling with each other.

RB: Cross-currents – need to be separated out – normal time measured by clocks and watches and has validity only in the area where something is happening. Not wrong – known that the duration of events varies depending on locations – Einstein – caused by gravity. Need to compensate for GPS system and the Einstein formula doesn't work (I was told). Ordering of events and speed and that is one way of discussing the idea of time and another way involves states. If we are present, self-remembering, time goes slower – a different time is being experienced. Subjective part of time – in Fulasnitamnian and Itoklanoz – Fulasnitamnian is about reaching completeness – achieve body kesdjan in your lifetime and if you did wouldn't die with the physical body. Spending 1000 years living 80 years, because in a higher state. G said he met someone who lived 300 years and that possible to live for 500 years.

1) To do with events 2) to do with state 3) Heropass

SJ: Fractions?

RB: Talking about the fractal nature of things. Work theory is that the Universe unrolls in a fractal manner, according to the law of seven. It is mathematical and could use different math. The world is fractal/fractions and goes down in octaves, smaller and smaller. The nature of the fractioning – 7s – down I think 8 levels.

AT: Simple example of fractioning – cards that you flip to make man appear to run – can only happen with fractions.

SF: Time and presence. Confusing – more present time slows down – inverse of more things happening in a unit of time, taking in more impressions – more experiences in a given unit. When he talks of time slowing for hypochondriacs ... when I have been sick, seems like time slows down. Hypochondria – means ribs and refers to organs below false ribs – related to melancholy.

RB: Being used philologically – associated with melancholy. Phenomenally tediously – in relation to phenomena, flows tediously. Inverse of what we are talking about. If your attention comes to rest in the moving centre, things go a lot slower, but not moving body any faster – to do with attention. Might be able to organize your body to protect it.

AT: when speed goes up, space contracts. When you consider Time, you have to take space into consideration.

RJ: G relates Time to the space you are in. Higher state have 389 time more impressions. More aware.

AT: More impressions you take in, more factions you are observing.

RB: Attention is seeing things it didn't see before.

AT: and therefore greater perception of space. Can't understand time without speed and relationship to space. Heropass – if constantly increasing, conception of space will decrease. If Endlessness creates greater space, Heropass will slow down.

RB: Heropass owes its existence to nothing

SF: Heropass. Strange word to use for time.

RB: Hero – Greek word. Don't know of another origin. Demi-God. Pass can only be from the word 'pass'. Either refers to passage of something from one place to another, or a route from one place to another.

SJ: Divine Love – does he talk about it anywhere else?

BP: On p370 mentions another time.

RB: Problem with the word "love". Greeks had 7 words for Love. Shows an issue. When we take a word like "love" and apply "divine" – not easy to compare with any other kind of love. Concept of Divine Love flowing.

BP: Judy suggested it is Theomertmalogos.

RB: Not sure. Problem is it implies a word and it could be thought of as a vibration. Is it a particular vibration and it flows everywhere?

SJ: Like the connection with Divine conscience.

RJ: Logos miss-translated – not 'word', 'pattern'

RB: Which is why I like to think of it as vibration. Difficult because it is very high.

SF: Puzzle about Time and Trogoautoegocrat. Notion that there is no time at level of Sun Absolute – only eternity, so why does it need to be banished. Creates process of involution and evolution, multiplicity, introduces the ravages of time that was trying to banish. Think of Time as the means things run down. Normal effects of time – decay, balanced by evolution. Had eternity, so what was the problem?

RB: Have to be careful with words. Trying to deal with reality. Eternity, infinity – can't show me any. It is a manmade concept. Can invent mathematical formulae that don't relate to reality. Infinity no relation to reality. Ouspensky said real relationship is about 1:30,000 – equals 1:infinity. To indicate difference in speed between H48, H24, H12. At a different level. In the scheme of the universe created by the Work, no continuities. Everything happens in pieces and no demonstration that there is any continuity anywhere. Human being takes pieces and threads together to make movie – eagle wouldn't see anything would see still shots, because its nervous system works in a different way. So – what are you talking about with 'eternity' – a long piece of time, OK, but not a piece of time that never stops. Can't demonstrate.

RB: Nature of Trogoautoegocrat. Think about the body you occupy and what it is doing now. None of it is static. Nothing is staying still. Slow moving, but everything is a process. Digesting food now. If you run out of food because you fast, still be burning fat. If you ignore the possibility of turning these things off (breath, impressions) would run out of substances. Various substances and they are moving up and down. You are a miniature Trogoautoegocrat and if any of

the process stops, you die. Apply to the whole Universe – everything is circulating and things are getting to the right place at the right time. Goes on for a lifetime and the Heropass confers the lifetime.

PS: And it is a closed system

RB: There are three points where stuff can enter from outside. Only the Absolute does not have that.

SJ: p126 “The duration of the process of the flow of Time is generally perceived and sensed in the same way by all the aforementioned cosmic Individuals and by the already completely formed what are called ‘instinctivized’ units but only with that difference which ensues from the difference in the presences and states, at the given moment, of these cosmic arisings.

How are they instinctivized?

RB: Varies according to the state they are in. If you examine a human being and the skill is in the instinctive centre, ability is dramatic. Any other aspect against instinctive centre is a moron. You might be the brightest mind on the planet ... if something should get a Nobel prize it is the instinctive centre. Moving centre is impressive, but compared to instinctive centre ... Invent a machine – put food into it, breaks into small lipids, amino acids, monosaccharides ... humanity is millions of years from being able to do anything like that. Algamatant is the one – extraordinary ability to put right amount of substance in right place.

RB: Cholesterol – when the liver wants to clean out fat-producing process, uses contents of gall bladder to deal with fats, creates large amounts of cholesterol. What our health system does is gives drugs to stop. We have an extraordinary machine and mostly it takes care of itself and mostly when it doesn't it is our fault. Don't bother with exercise and it will try to fix it. That's why Algamatant is an Angel. Some allegorical – Krentonalnian revolutions. Lurching movement. Not talking about well-behaved planets – lurching – more like our psyche. Reference to the way we complete our revolutions around our sun.

RB: Samos and Selos.

SJ: Binary star system

RB: Don't know whether they are common. When you go down to smaller level, similar size to Jupiter – so is Jupiter a sun? If the criteria is that it gives out heat? Then Jupiter is a sun, by that definition. Only ever found one in the middle and the rest orbiting. Samos – Sam means 'I' in Russian. Not been unable to unlock 'selos'. Higher than I?

BP: Selos, like cellulose. Like having 2 hemispheres of a brain.

RB: Like having emotional heart – solar plexus and actual heart. Not sure what is being talked about here.

PS: Diurnity? Not a real word. Close to diurnal

RB: Day and night. Allegory – consciousness?
