

Meeting 014: 29-Dec-2021

— Page 134 to Page 141 — UK session

Attendees: Paula, Gwynne Mayer, Michelle F, Robert Davis, XJ, James, Carole Orem

J: If reality is fractal in nature. Nature of living in a fractal reality. Shared YouTube video to demonstrate fractal. Start from octaves from top to bottom – gives means of separating from ongoing associates of three brained being. Representing absolute and ray of creation in terms of the fractal – what has it to do with me? I am here – self-remembering – all proceeding – I am here, now, within the fractal! Changed the experiences that were ongoing from moment to moment and this experiencing, the length of attention, expanded.

XJ: Fractals has always been my perspective of this – previous knowledge of science.

CO: Source?

RB: Mandelbrot set. Experimented with various mathematical formulae and this equation paints out a space and replicates at lower and lower levels – referred to as fractals. Although the image on YouTube behaved as if in motion, wasn't in motion – you that is moving – zooming in. Not to distract from the idea of the ray of creation is that everything fractions according to the law of seven so possible to create something based on that which carved out a fractal. Not 2D, it is 3D and is undergoing change at any point in time. So fractal representation is a primitive representation of that reality.

XJ: Mathematically has the concept of fractional dimensions.

RB: Term dimension – problem is different people give it different meanings and mathematically only has one. People describing behaviour of fractals as involving fractal dimensions and that is a misuse. Something small against something large. Ray of Creation down to atom – low level appears to be independent of the high and might be regarded as separate. String theory: 11 or 13 dimensions curled up ... but not reality. Only 3 dimensions of space. Can call extra dimension, but not.

RD: Mandelbrot – could you do law of seven?

RB: Couldn't do it in that form.

RD: Made up of irrational numbers – doesn't repeat?

RB: Don't want to start giving lectures on mathematics ... be very careful. Idea of fractioning means rational numbers – by meaning of the word: ratio. Octave expressed in rational numbers. Can introduce elements of mathematics if you want. Rational numbers take whole of natural numbers and they make ratios between them and allow operation of division, multiplication and addition ... what you may have thought of as a given are not – they are operators and they manipulate things. Problem is that mathematics isn't taught correctly. Basis of number theory is set theory and you would have to teach yourself set theory to understand numbers properly in terms of mathematics. May also be mystical nature, but not covered by mathematics.

Using fractal representation of the octave – each note of the octave is an octave and so on – very fractal. It doesn't really help us much. Word 'fractal' is just a word. You could invent any new word and apply that to the octave. The idea of a self-repeating system.

XJ: One thing in the physical world is chaos – which is dynamic.

RB: Chaos theory is an interesting way of looking at reality. Many examples of strange attract-

ors. Systems that appear to be coherent and predictable often are not.

XJ: Asked a question whether numbers existed before the world. Before mathematics we typically talk about ...

RB: Deeply religious question. Suggested that in the Sefer Yetzirah which describes creation, numbers and letters are described as seraphim (Hebrew alphabet). Very fiery things and maybe numbers are.

Not really addressing the text we have read ... G has been kind until now and in this chapter he just lets go!

RB: What does the word 'absurd' mean?

RD: Cacophony

RB: out of tune, out of harmony. This is the most out of harmony thing. The perception by human beings that the sun actually lights and heats – not only untrue is absurd.

RD: Is he saying that it happens in the atmosphere?

RB: This shouldn't be me telling everybody how to think. Consider every single word and what their meaning is. Make sure you understand what is being said.

IN ORDER, my dear Hasein, that you should meanwhile have an approximate representation also of just how far that function called 'the instinctive sensing of reality,' which is proper to every three-brained being of the whole of our Great Universe, is already entirely lacking in the presences of the three-centered beings breeding on the planet Earth, and especially in those of the most recent periods, it will be enough, to begin with, I think, if I explain to you only about how they understand and explain to themselves the causes why there periodically proceed on their planet those cosmic phenomena which they call 'daylight,' 'darkness,' 'heat,' 'cold,' and so on.

What is this paragraph saying? We don't instinctively sense reality.

'All, without exception, of the three-brained beings of that planet who have attained the age of a responsible being, and even those many and various 'wiseacrings' existing there which they call 'sciences,' are categorically certain that all the said phenomena arrive on their planet completely, so to say, ready-made, 'd-i-r-e-c-t-l-y' from their own Sun . . . and as Mullah Nassr Eddin would say in such cases, 'no more hokeypokey about it.'

RD: **Hokeypokey** – goes back to liturgy. Based on Latin mass. Directly part – same as when he wrote directly to hell. On p75 – cylinder – about heat and cold in that.

J: Daylight in sense of consciousness and darkness waking sleep. Heat is that which allows evolution of substances through the substrate of the body and cold would do the opposite and H48 transformed downwards.

RB: If we take the idea that the only thing that ever happens in terms of events is the law of three. Everything happens by the law of three. If the sun is the active force in heating up the earth, there are still two other forces before the earth will heat up. So idea of sun responsible contradicts the law of three. Have to go down to an event. You are sitting in a deck chair naked from the waist up and appear to be getting sunburn – what is going on?

J: Radiation affecting skin cells?

RB: I think a ? is being put against that by G here. I don't know.

RD: Omnipresent active Okidanokh – trigger – sun active and we are passive?

RB: Don't think of the Universe in the way it is described in The Tales. Everything is alive, or a substance within something that is alive – no exceptions. If somebody mentions to you that a telescope has spotted an asteroid in the farthest reaches of our solar system ... it is alive.

RB: If we have no explanation for okidanokh, might as well give up

GM: Vivifyingness of vibrations – constantly infusing the atmospheres. When you are aware ... law of three always in operation at every level.

RB: p138 *"You must also know further, that only one cosmic crystallization, existing under the name 'Omnipresent-Okidanokh,' obtains its prime arising—although it also is crystallized from Etherokrilno—from the three Holy sources of the sacred Theomertmalogos, that is, from the emanation of the Most Holy Sun Absolute.*

If you didn't take that in and the word Okidanokh comes up ... you wouldn't know what it means. It would appear that it is omnipresent.

RD: Reminded me of the ship called 'omnipresent'.

RB: Did G accidentally choose words?

RB: Concept of **omnipresent**.

J: Omni – All, and Present - Every.

RB: Very little present in terms of this individual sitting in front of the zoom meeting, or my interest is such that I am more present ... or may have raised my level to self-remembering. You can always remember yourself easily by being aware of what is out there and that I am here ... Should a fair amount of attention be built up and I become aware of all the sensations of my body ... that level of sensation (that we all surely know about) that is omnipresence within my personal Trogoautoegocrat.

RB: If something is omnipresent it is part of the Absolute.

RB: Met with this paragraph before, because I had to understand for my work on Objective Science. The word **'Okidanokh'**?

RB: Most likely means: that which gives a soul. Oki: Armenian can be taken to mean soul; da – latin ending for 'give'. Makes sense in terms of what is being described here.

Something between Absolute and Etherokrilno that creates a crystallisation. Gives a soul to all cosmic arisings and is a fraction of the absolute.

RD: Animals?

RB: Everything is alive – if wasn't alive and becomes alive is an arising. Life force – could say it has a soul? Various bodies that can arise from any living thing, only when it crystalized to a certain level becomes a soul.

RB: Don't really use the word soul for this – 'attention'? Can become crystalized attention and until it decrystallizes, okidanokh is trapped (or happy to be there).

RB: Take these individual words and take a meaning for them, so that we have something to use when they come up in the future.

RB: *"Everywhere in the Universe, this **'Omnipresent-Okidanokh'** or **'Omnipresent-Active-Element'** takes part in the formation of all both great and small arisings, and is, in general, the fundamental cause of most of the cosmic phenomena and, in particular, of the phenomena proceeding in the atmospheres.*

We can say for certain that the omnipresent okidanokh in our atmosphere didn't get there from the sun – it was always there. Light, darkness, heat, cold happen because of this substance. That is what it says.

J: What is the difference between emanation and radiation?

RB: Term radiation isn't ambiguous. Something radiates out from a centre – a cause at the centre which leads to something radiating out from it. You could say that Jupiter radiates light and so does Saturn – because if you put a satellite that is collecting radiation and point at those planets you will realise that they are radiating their own light. The moon is reflecting light from elsewhere. G insists that all planets radiate light. The planets also emanate and what they emanate is an atmosphere and a magnetosphere and there is a limit to how far that goes. Something that radiates from Jupiter goes for as long as it goes – away from the sun into the universe and maybe for billions of years before it hits anything. Nothing that indicates that there is something at the end of the radiation that it is seeking out – not been attracted. Sun not shining because something elsewhere attracted it. Emanations go to the heliopause (the edge of the solar system) and stop there. And I think that is the difference between emanations and radiations.

J: Necessarily penetrating each other at all times.

RB: Don't have a good perception of your own atmosphere, but you realise that you have an atmosphere and others have an atmosphere. Within 3 feet of someone your atmospheres are touching. 100 yards down a corridor, atmospheres not touching, but you can see each other (radiation). Question about how emanations and radiations affect one another.

J: Three forces – emanation, radiation and a third?

RB: Don't know. Important point that scientists don't know difference between emanations and radiations. What directly comes to earth from sun is emanation: aurora ... stops at heliopause and interacts with our planet and others. At the same time a lot of electromagnetic radiation that comes out of the sun – not sure what that is. We call it light and radiation, but doesn't explain what it is, just that it has different wavelengths.

RB: Trogoautoegocrat?

J: Most holy sun absolute wanted to stave off affect of Heropass ... endlessness ejected merciless Heropass by creating megalocosmos via Trogoautoegocrat. Once into etherokrino, through hanel miatznel, clumped together ... evolution and involution of substances and we have to take in food air and impressions to survive ...

Trogo – eat; ego -self; crat – govern ... I am a system of government that eats itself.

RB: One of the most important ideas that we have. In order to see the world as it is, need concepts to express the nature of the world as it is. The point is that because it is a Trogoautoegocrat, there are consequences in respect of the way it works. Not particularly obvious. If you were to stop eating, it would take about 12 days for the body to realise it should start some extreme economy. Can normally do 7 days without too much of a problem. If you stop drinking water, you might last 2-3 days. If you stop breathing, might get to 10 mins, but most only 6-7. If you stopped taking in impressions, you would die immediately. We know this because there are certain nerve poisons that can be injected into people to paralyse the nervous system and you die immediately. Fastest acting poisons on the planet are nerve poisons and they stop you ingesting impressions. Four necessities for life: food, water, breathing, impressions. Starts to paint a picture of a universe – you. Let's say something in your body stops air getting from your lungs into the blood system – doesn't matter what it is – immediately various aspects are not functioning and it isn't long before the body is dead. No difference how old you are. You are a

process and if any part of that process misfires you die ... eventually. Think of yourself as a process – always eating, digesting something. Always breathing, taking in impressions – always. Harnel Miatznel not working = illness – some substance not getting to where it needs to be. Law of three not happening. Same if the body stops excreting. Problems of a given human being can be described in these terms. Emotional memory lodged in the muscle system of the body, or something that brings on negative associations. Trogoautoegocrat being stopped. In 8 months cells of body will be replaced ...

If an asteroid passes the Earth, it is going somewhere – even if you have no way of knowing its destiny. True of the whole universe: Earth, Moon ... Global warming isn't going to destroy the Earth – Great Nature will do something so that the Earth can survive. This is how we should look at the world. Nobody in the Work explained this to me – have come up with this from reading this book, so interested if you disagree. I may have got it wrong.

RD: Associate Djartklom with raskooarno.

RB: Conceived and something enters into your existence and you have the possibility of evolution beyond just the body growing. The evolution of the single fertilized ovum is reasonably well understood. Fertilized eggs grow from second one and ovum started to reproduce amoeba like – same stuff gets bigger – then part dedicates to attaching to the wall of the womb – becomes the placenta and will be around until birth but won't be part of you. The rest divides into three different groups of stem cells. Not well understood how human beings work ... we are stem cells. Most of the cells of the body are not stem cells. When you need to create a new skin cell, a stem cell will create it and another will die. Have stem cells creating your body all the time. They divide into units and turn off their own DNA – one part of that three sets will become the muscle system and the backbone – moving centre and everything that attached; second becomes the enteric nervous system and will create the systems of the gut to process food and going to become the emotional centre; third set form the head brain and control of the nervous system from the head brain becomes the thinking centre - and that is how you were born. When we die, whatever magic created those sets of stem cells is going to return to where it came from. Substance of physical body goes to the Earth. Some of the mental body will go the moon and if there is a fully formed kesdjan body – won't be a death, will be a shedding and what remains will live on. If Reason has been developed can live on attached to the kesdjan body. Process of returning depends on what kind of death. The parts form into okidanokh, which can then attach to next thing.

US Session

Attendees: Paula, Jeff Klopp, Ronald Jones, Jeff Tripodi, Sandra Whitmore, Anthony Tan, Bobbie Pennock, James O'Donnell, Stephen Frantz, Anne Little, John Amaral, Martha

SF: What is Okidanokh? Used to think it was the highest hydrogen, but now think it is something that takes part in every step of the transformation and gets changed in respect of the vivifyingness – not one of the substances. Djartklom – used to think it splits so that each of the three centers was crystalized, but if true what does that mean for something lower in the ray of creation ... such as a rock?

RB: Went through this on a word by word basis – needed to understand okidanokh for the hydrogens seminars. Etymology: Oki – implication of soul or attention; da, almost certainly from Latin, to give; nokh, (Armenian) the thing that. The thing that makes the soul possible. Can trace the growth from a single ovum to an embryo very accurately – been done in laboratories. When the egg gets to a certain point in terms of number of cells, can no longer go back. Can take a hair to split the two parts of the ovum and can do that up to a point. There is a point of transformation when the arising starts to specialise. When it does that, it divides itself into

three. Those three are collections of stem cells. One collection is going to form the backbone and muscle structure and provide the substrate for the whole of the moving centre – and the moving centre too. The second collection of stem cells forms enteric nervous system, digestive system and organs, including heart – substrate for emotional system. Third part head brain and nervous system, which threads into other two parts. Development of human embryo – exhibits djartklom in some way. From human perspective (don't know about kangaroo, flying squirrel ...) from outset of conception, something divides into three and they are centers of awareness in human being. Okidanokh – something that gives awareness is credible. If you pursue further and let the human being as soon as he/she can join a Gurdjieff group and develop essence – emotional part will ascend. The body of the Soul/body of Reason must also start developing. Follow through to being part of Tales Study Group on the internet – what happens if it dies? All the parts separate – rascoarno. Or if kesdjan body has been formed, it isn't really death – shedding. If it all dies – can become okidanokh again, but if they have raised their level, Okidanokh will be at a higher level. Opposite can happen – no intellect, no moral awareness – can be that okidanokh vibrating at a lower level.

SW: *Everywhere in the Universe, this 'Omnipresent-Okidanokh' or 'Omnipresent-Active-Element' takes part in the formation of all both great and small arisings, and is, in general, the fundamental cause of most of the cosmic phenomena and, in particular, of the phenomena proceeding in the atmospheres.*

Raises the point of the atmospheres – important and not sure how to think about it.

Okidanokh is the first crystallization – material created.

RB: Not going to be resolved without going through Purgatory and reading what is said there. Not the whole of the story here (arguably not in Purgatory either).

RB: Speculation about the nature of the Universe. Things at the very highest level that we don't know about. One question is: did numbers come before the creation or afterwards? G makes statement that at the time of the Autoegocrat, Endlessness existed alone in the Universe except for the area marked out by the Sun Absolute, with Etherokrilno. Question is are we to assume that the Absolute is NOT Etherokrilno and not constituted from Etherokrilno?

SW: Etherokrilno has a relationship to electricity that I can't explain and assume that the Absolute exists independently from it.

RB: I happened in the past couple of days, accidentally ... studied Sefer Yetzirah around 40 years ago ... if you read that text it isn't clear what every word means, but if you read it then the suggestion is that the creation of the Universe occurred when God separated himself from Himself. The Absolute split into two parts – infinite light and infinite heavy and the Universe came into existence between those parts. That version of the Absolute existed with his Seraphim, and they were numbers and letters of the Hebrew alphabet. Numbers are in fact alive – and more alive than you and I are. The letters of the Hebrew alphabet have symbolic meaning and all of the nouns of the Hebrew language created by Moses are derived from the verbs. No idea of a house before the idea of housing something. Verbs came before the creation and nouns came afterwards.

RB: p135 Who picked up on **Oskiano**?

SF: Made me realise that there was more to the word than I had thought. Implanted from without at a very early stage was a new idea for me. Related with the notion of remorse. Get implanted with the capability to ascend, even if we don't know or remember how. Something is capable of pulling us up.

RB: We can read this book and let words flow past us.

You, for instance, have the normal presence of a three-brained being, and within your presence there is intentionally 'implanted' from without, 'Oskiano,'...

Suggestion that there is stuff already implanted in us and shouldn't be surprised. Not clearly expressed before. Born with a higher intellectual and emotional centre and they are operating and one of the features of higher emotional centre is conscience and it is a capability that allows me to know what to do in situations where there is clearly a choice. Not something I work out from what I was taught – something that I know. Oskiano means 'making gold'. Implanted intentionally in us and we have to go and find it.

Statement that we don't sense reality. Basic concepts of daylight, darkness, heat, cold ... don't come from the Sun.

"In reality, the surface of their 'Source-of-Heat,' like that of all the ordinary suns of our Great Universe, is perhaps more covered with ice than the surface of what they call their 'North Pole.'

Traditionally, in Tales groups where we have discussed the idea, assumption is that he is referring to our sun – inside us- solar plexus – and our sun is in fact cold. That is reasonable if you are looking for it to be explicable, but don't think it explains this chapter.

Lopsided monstrosity. If moons are a natural process and the feeding of them is part of the trogoautoegocratic process. Why is our moon a monstrosity?

RB: Good question. We know now that the moon is from the Earth – lunar rocks came from the Earth. Alternative scenario is that the Earth captured a rock and it became the Moon – in which case the rocks wouldn't have been the same. How does a planet give birth to a Moon? No idea whether G cared or talked about that.

BP: Instinctive – is that related to Essence? (p134)

RB: Would refer to instinct. Been experiencing recently the idea of just trying to experience reality. Just look inside and see what is happening. Leads to perceptions that are uncommon. Instinctive – doesn't mean looking it up in a book. Question that needs to be examined – what do you know for sure?

SW: Instinctive sense of reality is one thing to see if you can sense. Proper to every three-brained being – just not human beings.

SW: Oskiano – implanted in the ovum/human being, but I thought it was implanted from outside (education). This gives a different implication.

RB: Something given to us with which we can make gold.

RB: I know that I am. How do I know that? Some instinctive something.

SW: And I tend to forget it a lot.

RB: When you have a perception that isn't a dream of working on yourself it is very odd. It doesn't have any after-thoughts. We shoot them dead with after-thoughts all the time.

SF: Notion of self-consciousness, level above normal consciousness, such a thing as three brained beings that don't have to work as hard as I do – awareness of 'I am' all the time. Instinctive – hard-wired and thinking can't monkey with it.

RB: Many levels of self-remembering. Maybe that is what you are talking about with self-consciousness.

RB: Trogoautoegocrat. Omnipresent-Okidanokh.

Problem we have with words is that become identified with it and it becomes dead. Trogoautoegocrat is one of the most important concepts in the Work. I rule myself by eating. I rule by eating myself. My system is one of self-eating. We make errors in conceptions of myself. The Work is precise about language. Confusion of tongues – never understand each other about anything together than very practical things. But can in the Work if they adopt the words that they are given – The Tales is your dictionary for all the words of the Work. The language that G thinks describe reality.

We cannot survive without eating – at least once a day. If we stopped eating, after about 10 days body would start to economise significantly. Can do 7 days without too much problem. If you keep not eating you will die eventually. If you stop drinking – possibly have about 3 days. If you stop breathing – dead in about 5 mins. If you stop perceiving things will be dead instantly – know because of nerve poisons, which kill a human being fastest. Paralyse nervous system and makes it impossible to perceive impressions. What we are as a living thing is something that is processing food, water, air and impressions and never stop. Can look at the whole body as a series of octaves within octaves and stuff required is delivered to where it is needed in the proportion that is required. Pancreas will have to produce bicarbonate of soda because of stomach acid. Algamatant knows what is required. Secretions in right proportion throughout the alimentary canal. You have no idea how to do that – it is a genius. There are other things the body does – every now and then the liver cleanses the gall bladder and raises the level of cholesterol to wash it out. These processes happening throughout the whole body. If anything happens in your Trogoautoegocrat where something isn't where it is needed, you get sick or die.

The miraculous piece is that you aren't any different to anything else. The same is true of a planet, galaxy, asteroid, fish ... all functions like this. If the Trogoautoegocrat that we think of as life on Earth is going badly wrong – that is our opinion – and if human beings are getting in the way, they will be wiped off the planet. Our view is so human centric.

JA: Number before creation? Form of creation. The way we think about it is that there is a dipole – which you pointed out – positive and negative. Based on that consider that Etherokrilno is not a substance but a form – dictates the form of matter.

RB: That is a valid idea and I hadn't had that. Have to work back from what we know is true.

JA: Diagram of Everything Living. Trogoautoegocratic process – what is eating man? Angels, Archangels. We are familiar with mass-based world and can extrapolate into world of impressions, emotions too. If everything is eaten and being eaten, or something we produce is being eaten in this hierarchical arrangement of being eaten?

RB: Not simple. You start eating a leg of Turkey – as a human being you need muscle and it would be very convenient if you could transform a leg of Turkey into muscle, but we can't do that. If you look at the consumption of three foods, in order for that piece of Turkey muscle to become human muscle, has to be broken down into amino acids and there is more required. Also need to work out where this bit of muscle is going to go. And the stem cells are doing all of this and they can't do it unless they have everything they need.

Is an ant an individual, or a cell in a larger animal? Am I an individual, or just a cell in humanity? It appears that Archangels eat man. How do I get to be food for an Archangel? Do we collectively become part of an Archangel?

SW: To some extent takes us back to Arch Absurd – sun doesn't light and heat and we don't know why. The Universe is not what we think it is and has to do with the Trogoautoegocratic process and the eating up the ladder.

RB: Omnipresent-Okidanokh – it is everywhere. Don't have a good concept of omnipresence.

Sitting and become aware of individuality and breath – Work exercise. If we do it with reasonable success, we end up fully aware of our body – sensation throughout whole of our body – that is omnipresence within our Trogoautoegocrat. Attention of Absolute reaching out to try to sense whole of creation. For every new arising – there is a particle of this Okidanokh which immediately enters into the new arising and the Absolute is sensing his universe ... in us manifests as awareness and if strong, get the idea that we make it stronger and try to crystalize our capability. Seems to me that is what the words are suggesting. Arising dies and awareness goes back and reforms and lives at a certain level of vibration. Took me a long time of reading this chapter that is what is apparently being described. Didn't get a strong conclusion – just felt like probably what this is.

SF: **Remorse**? Associated with guilt, shame, genuine internal feeling like “I wish I hadn't done that”. Something to do with subjecting myself to an outside judgement. Etymology of remorse – comes from ‘bite’ – something within me looking at myself in a different way – associate with eating.

every part that has arisen from the results of any one Holy Source of the Sacred Triamazikamno, as it were, ‘revolts’ and ‘criticizes’ the former unbecoming perceptions and the manifestations at the moment of another part of its whole—a part obtained from the results of another Holy Source of the same fundamental sacred Cosmic Law of Triamazikamno.

RB: **CS Nott writes intelligent stuff. English medieval idea. Ayenbite of Inwyt. Ayenbite – again biting. Inwyt – inner knowing. Where you know you have been wrong with complete certainty and it bites.** Point in the Work that is difficult – have to have sufficient experience to distinguish between energies of different levels. Remorse is normally spoken of in same breath as impartiality. Everything that people naturally associate – belong to lower level of hydorgens and are partial. Probably hydrogen 24 and are negative emotions and associated with denying part of emotional centre. Remorse is H12 and is experienced as pain or joy. That experience is exquisite and isn't something that is fought against or denied. But can be exquisitely painful, because you see immediately what a jerk you are. You live with it. That is what you are. What did I ever do that was wrong and see what comes up. Start to investigate and ask what you think now. You will find lots of those events in childhood because many things are misunderstood.

SW: Sounds like therapy to me. My main reaction now is not joy, but pain and tendence to supress.

RB: **Remorse is what makes the star shine.** Symbolized by the halo around the Saint – symbol of impartiality. Almost a paradox. States are difficult to achieve, but he is describing a lot of this in this chapter.

SW: **Sacred Aieioiuoa?**

RB: All the Greek vowels in a word. There is a tradition that goes back a long way and not in our education. Languages written a long time ago – Hebrew alphabet – written form, 22 letters, are all consonants. You can debate with Rabbis whether Aleph is a consonant. All those sounds relate specifically to acts of the Absolute. The tetragrammaton – nobody knows how to say the word because it was a secret how to pronounce it – had a force that could be abused. G, by introducing Aieioiuoa, remorse isn't made of consonants. Let's imagine that at the end of your life you haven't developed a kesdjan body and you die – always proceeds with the Omnipresent-Active-Element-Okidanokh also – is an experience of remorse.

SF: I think it is the feeling that I missed the boat – didn't do what I was here for and now I don't have any time left.

RB: We have the story of the prodigal son. Doesn't matter that we took so long to come back,

will be welcome. Counterpoint.
